MOHAMMED MUJEEBA

Full Stack Developer - React, Node.js/Express, Docker, Linux

+966 58 160 2156 | mdmujeeba66@gmail.com | linkedin.com/in/mujeeba-mohammed-277953363 | github.com/muzy326

PROFESSIONAL SUMMARY

- Full-stack developer with professional and independent experience designing, building, securing, and deploying production-ready web applications across React, Angular, and Node.js/Express
- Builds and maintains RESTful APIs with Node.js/Express, PostgreSQL, and Firebase/Firestore, including server-side session authentication, bcrypt password hashing, and Zod/schema-based input validation
- Containerizes and deploys applications with Docker and Docker Compose on Linux (Ubuntu) servers, including Nginx reverse proxy configuration, AWS EC2 hosting, and HTTPS/TLS via Let's Encrypt
- Skilled in Angular (standalone components, Signals, RxJS, reactive forms, functional route guards) and React (hooks, Context, TanStack Query, generated API clients)
- Builds AI-powered application features using the Google Gemini API and n8n workflow automation, and integrates them into production systems
- Comfortable owning a feature end-to-end, from architecture and local environment setup through containerized production deployment and maintenance, in fast-paced, cross-functional teams

TECHNICAL SKILLS

- **Frontend:** React (Hooks, Context, TanStack Query), Angular 20 (Standalone Components, Signals, Functional Guards), JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Bootstrap, RxJS, Reactive Forms
- **Backend:** Node.js, Express.js, RESTful API Design, Session-Based Authentication, JWT Authentication, bcrypt, Zod Schema Validation
- **Database:** PostgreSQL, Drizzle ORM, Neon, Firebase Firestore (NoSQL, real-time sync)
- **Docker and Linux:** Docker, Docker Compose, Linux (Ubuntu) server deployment and troubleshooting, Nginx reverse proxy, HTTPS/TLS via Let's Encrypt
- **Cloud and Deployment:** AWS EC2, Vercel, production deployment and maintenance
- **Application Security:** httpOnly/secure cookies, server-side input validation, password hashing, authentication and authorization design
- **Testing:** Mocha, Chai, Unit Testing, API Testing
- **AI and Automation:** Google Gemini API, n8n Workflow Automation
- **Tools:** Git, GitHub, VS Code, npm/pnpm, Angular CLI, Vite

PROFESSIONAL EXPERIENCE

Frontend Developer, Pep Systems, Hyderabad, India | Jun 2023 - May 2025

- Developed and maintained responsive web application components using Angular, TypeScript, HTML, and CSS
- Collaborated with the development team to implement UI features and resolve bugs within a component-based architecture
- Integrated third-party and internal REST APIs into Angular applications, handling authentication, error handling, and data transformation across the stack
- Built and consumed Angular services with dependency injection, and adopted Angular Signals for fine-grained reactive state management in newer components
- Owned local environment installation and setup, including Node.js/Angular CLI tooling, dependency configuration, and project scaffolding for new features and services
- Containerized and deployed applications using Docker and Docker Compose on Linux servers, using AWS EC2 with Nginx and HTTPS
- Applied JWT authentication and Git/GitHub version control across the development workflow
- Used AI-assisted development tools such as Claude and ChatGPT to speed up debugging, code review, and technical documentation

Independent Developer (Self-Employed) | Jun 2025 - Present

- Currently upskilling independently while self-employed, designing, building, and deploying production-grade full-stack and AI-integrated applications end-to-end

- Shipped one full-stack production application (DriveAI) and two frontend/full-stack applications (PlumAI, Bakery-Hub), covering UI development through live deployment
- Built AI-powered features using the Google Gemini API and n8n workflow automation, including natural-language search and conversational assistants
- Applied modern Angular practices (standalone components, Signals, functional guards), React, and Node.js/Express REST APIs across projects
- Full project details are listed under Projects below

PROJECTS

Bakery-Hub - Bakery Management and E-Commerce Platform

Full Stack Developer | Live: bakery-hub-eta.vercel.app | GitHub: github.com/muzy326/Bakery-Hub

React, TypeScript, Express.js, PostgreSQL, Drizzle ORM, Neon, Vercel

- Built a full-stack bakery platform with a React/TypeScript frontend and an Express.js REST API, covering customer ordering, product/category management, order and payment flows, and an admin dashboard
- Implemented server-side session authentication with httpOnly/secure cookies, bcrypt password hashing, and Zod schema validation on every API endpoint
- Migrated application data from in-memory storage to PostgreSQL using Drizzle ORM and Neon
- Designed RESTful APIs with Express.js and generated a typed API client (OpenAPI + Orval) consumed by the React frontend via TanStack Query
- Deployed the production application on Vercel with Neon PostgreSQL

DriveAI - AI-Powered Car Rental Platform

Full Stack Developer | Live: mujeeba-drive-ai.duckdns.org | GitHub: github.com/muzy326/car_application

- Built a full-stack car rental platform using Angular, Node.js/Express, and PostgreSQL
- Containerized the application with Docker Compose and deployed it to a Linux (Ubuntu) server on AWS EC2, behind an Nginx reverse proxy with HTTPS via Let's Encrypt
- Designed and implemented AI-powered natural language car search, an AI booking assistant, and conversational admin analytics using the Google Gemini API orchestrated through n8n workflows
- Automated booking-confirmation emails via Gmail OAuth2, triggered on booking creation
- Built an analytics dashboard visualizing revenue trends, booking activity, and customer growth using amCharts4

PlumAI - E-Commerce Platform

Frontend Developer | Live: e-commerce-d8c67.web.app | GitHub: github.com/muzy326/e-commerce

- Built the frontend with Angular 20 using fully standalone components and functional route guards (authGuard, adminGuard) to protect private routes
- Built reactive forms with live validation for login, registration, checkout, and admin modals using FormGroup and FormControl
- Managed real-time application state with RxJS Observables for Firestore data streams, backed by a BehaviorSubject-driven cart for instant UI updates
- Modeled a Cloud Firestore NoSQL database with four collections (users, products, categories, orders) with real-time sync across all clients
- Implemented custom email/password authentication directly against Firestore via the Firebase JS SDK

EDUCATION

Master's in Electrical and Electronics Engineering - Power System Analysis

Jawaharlal Nehru Technological University Hyderabad (JNTUH)

LANGUAGES

English, Urdu, Telugu
