MOHAMMED MUJEEBA

Front-End Developer - React, Angular, JavaScript, Responsive Web Design

+966 58 160 2156 | mdmujeeba66@gmail.com | linkedin.com/in/mujeeba-mohammed-277953363 | github.com/muzy326

PROFESSIONAL SUMMARY

- Front-end developer with hands-on experience building clean, responsive, component-based web interfaces using HTML, CSS, JavaScript, React, and Angular
- Comfortable converting design specifications into functional, cross-device layouts, implementing forms, navigation, and interactive UI components
- Experienced using Git/GitHub for version control, branching, and collaborative code review workflows within a team
- Skilled at testing and debugging front-end code using browser developer tools, resolving layout, styling, and JavaScript issues
- Also brings additional full-stack experience (Node.js/Express, REST APIs, PostgreSQL, Docker) and AI-feature integration, giving a broader understanding of how front-end work fits into a complete application
- Enthusiastic about learning new front-end tools and frameworks, applying feedback from code reviews, and growing within a collaborative remote team

TECHNICAL SKILLS

- **Front-End Fundamentals:** HTML5, CSS3, JavaScript (ES6+), TypeScript, Responsive Web Design, Tailwind CSS, Bootstrap
- **Front-End Frameworks:** React (Hooks, Context, TanStack Query), Angular 20 (Standalone Components, Signals, Functional Guards, Reactive Forms), RxJS
- **Version Control & Workflow:** Git, GitHub, branching, pull requests, code review
- **Testing & Debugging:** Browser Developer Tools, Mocha, Chai, Unit Testing, API Testing
- **Backend (additional):** Node.js, Express.js, RESTful API Design, Session-Based Authentication, JWT Authentication, bcrypt, Zod Schema Validation
- **Database (additional):** PostgreSQL, Drizzle ORM, Neon, Firebase Firestore (NoSQL, real-time sync)
- **Docker & Linux (additional):** Docker, Docker Compose, Linux (Ubuntu) server deployment, Nginx reverse proxy, HTTPS/TLS via Let's Encrypt
- **Cloud & Deployment (additional):** AWS EC2, Vercel, production deployment and maintenance
- **Application Security (additional):** httpOnly/secure cookies, server-side input validation, password hashing, authentication and authorization design
- **AI & Automation (additional):** Google Gemini API, n8n Workflow Automation
- **Tools:** Git, GitHub, VS Code, npm/pnpm, Angular CLI, Vite

PROFESSIONAL EXPERIENCE

Frontend Developer, Pep Systems, Hyderabad, India | Jun 2023 - May 2025

- Developed and maintained responsive web application components using Angular, TypeScript, HTML, and CSS, converting approved UI designs into functional pages
- Collaborated with the development team to implement UI features, navigation, and interactive components, and resolve bugs within a component-based architecture
- Tested and debugged front-end code using browser developer tools, and resolved layout, styling, and functional issues before submitting work for review
- Used Git/GitHub for version control, branching, and collaborative code review across the development workflow
- Integrated third-party and internal REST APIs into Angular applications, handling authentication, error handling, and data transformation across the stack
- Built and consumed Angular services with dependency injection, and adopted Angular Signals for fine-grained reactive state management in newer components
- Owned local environment installation and setup, including Node.js/Angular CLI tooling, dependency configuration, and project scaffolding for new features and services
- Containerized and deployed applications using Docker and Docker Compose on Linux servers, using AWS EC2 with Nginx and HTTPS

- Used AI-assisted development tools such as Claude and ChatGPT to speed up debugging, code review, and technical documentation

Independent Developer (Self-Employed) | Jun 2025 - Present

- Currently upskilling independently while self-employed, designing, building, and deploying production-grade front-end and full-stack applications end-to-end
- Shipped one full-stack production application (DriveAI) and two frontend/full-stack applications (PlumAI, Bakery-Hub), covering responsive UI development through live deployment
- Built reusable, component-based interfaces with React and Angular, applying modern practices (standalone components, Signals, functional guards, hooks, Context)
- Built AI-powered features using the Google Gemini API and n8n workflow automation, including natural-language search and conversational assistants
- Full project details are listed under Projects below

PROJECTS

Bakery-Hub - Bakery Management and E-Commerce Platform

Full Stack Developer | Live: bakery-hub-eta.vercel.app | GitHub: github.com/muzy326/Bakery-Hub

React, TypeScript, Express.js, PostgreSQL, Drizzle ORM, Neon, Vercel

- Built a full-stack bakery platform with a React/TypeScript frontend, covering customer ordering, product/category management, order and payment flows, and an admin dashboard
- Implemented responsive, component-based UI using React hooks and Context for state, with a typed API client consumed via TanStack Query
- Designed RESTful APIs with Express.js, server-side session authentication, and Zod schema validation on every endpoint
- Deployed the production application on Vercel with Neon PostgreSQL

DriveAI - AI-Powered Car Rental Platform

Full Stack Developer | Live: driveai-web-1.onrender.com | GitHub: github.com/muzy326/car_application

- Built a full-stack car rental platform using Angular, Node.js/Express, and PostgreSQL
- Built a responsive, component-based Angular frontend with an analytics dashboard visualizing revenue trends, booking activity, and customer growth using amCharts4
- Designed and implemented AI-powered natural language car search and an AI booking assistant using the Google Gemini API orchestrated through n8n workflows
- Containerized the application with Docker Compose and deployed it to a Linux (Ubuntu) server on AWS EC2, behind an Nginx reverse proxy with HTTPS via Let's Encrypt

PlumAI - E-Commerce Platform

Frontend Developer | Live: e-commerce-d8c67.web.app | GitHub: github.com/muzy326/e-commerce

- Built the frontend with Angular 20 using fully standalone components and functional route guards (authGuard, adminGuard) to protect private routes
- Built reactive forms with live validation for login, registration, checkout, and admin modals using FormGroup and FormControl
- Managed real-time application state with RxJS Observables for Firestore data streams, backed by a BehaviorSubject-driven cart for instant UI updates
- Designed a custom CSS design system using CSS custom properties for colors, shadows, border radius, and animation keyframes, ensuring consistent visual presentation across pages
- Implemented custom email/password authentication directly against Firestore via the Firebase JS SDK

EDUCATION

Master's in Electrical and Electronics Engineering - Power System Analysis

Jawaharlal Nehru Technological University Hyderabad (JNTUH)

LANGUAGES

English, Urdu, Telugu
